Subject: hello

i want to say, that i dont like the settlement that the DOJ has reached with microsoft, this is not helping the consumers, and of course, not helping the economy at all, microsoft allways had the winner track on all these computer business, i think that we are loosing the economy on the computer market with this settlement, the 9 of the 18 states started this because microsoft's MONOPOLIC tactics, they started this because the POWER AND THE MONEY that microsoft have win in this computer market is not ALLOWING other little companys to start or to reach a good market, because MICRO\$OFT can buy the competitor... or add a "new free feature" to the next os, and the competitor will be down and dead, and microsoft will not spend more money again, this is not helping the AMERICAN ECONOMY, this is helping MICRO\$OFT ECONOMY, i was wondering why? i can travel to USA proof that im good for the USA economy and the American Gov. will loan me money to start, so i can grow as a business in the USA, a country that i love, and i will like to live on, but what happens here? with this settlement the only thing that you, DOJ, 9 states of the 18 states are doing is destroying the chance of people like me or any other little company that wants to start something in the computer market, why should i do it? if i will loose against microsoft in one way or another? this settlement is not protecting the AMERICAN ECONOMY and that is the big mistake...

because in the way this is handle, 5 years of restricted stuff for microsoft? what is that? microsoft agreed in other settlement to pay 10 billons, that shows to you how much they care of that 5 years, in the 6th year they can recover all the money they loose, please, dont give them the chance to destroy the american economy, this cant be tolerated!!!! the american economy is not moved by microsoft, is moved by hundres or 1000! of people that wants to start something or a business in that great country! but in the way this is going, microsoft will be able to do whatever they want, that is bad!! very bad!

microsoft can loose 10 billons of dollars but they know that they can recover it once again when the 6th year is reached! or by going back to their tactics! the split of the company was the best to do!!! but if you cant make them do that then go for the proposed by the 9 REBEL STATES the open of the code of IE and other things they had in mind please! do it for ALL THE ECONOMY, not just MICRO\$OFT ECONOMY this move, and the tactics that microsoft allways used is destroying the little and medium companys arround, and in some years, you will have nothing, and who can we blame about that?
